

Enterprise CRM, Call Center & Lead Privacy Operating Manual

A Detailed Technical & Operational Guide for Customer Care, Sales Executives & Management

SYSTEM ACCESS & ARCHITECTURE DECLARATION

This official operational manual details the purpose-built **PropertyFlow CRM Suite** deployed for **Buckcrest Havens Limited**. Designed specifically to maximize sales velocity while strictly safeguarding proprietary lead data, the system provides **centralized customer care calling, automated follow-up logging, strict cross-rep data privacy, and real-time executive oversight.**

Portal Access URL:	https://bhl.nawpropertyflow.com.ng/login
Client Organization:	Buckcrest Havens Limited
System Instance:	Dedicated Isolated Database Schema (stufedoc_nawcrm_bhl)
Core Capabilities:	Lead Ingestion, Call Logging, Follow-Up SLAs, Strict Lead Privacy
Protected Roles:	Executive Board, Customer Care Team, Sales Consultants, Finance
Data Security Level:	Zero-Cross-Visibility Anti-Poaching Protection Active
Publication Date:	September 2026

1. Strict Lead Privacy & Anti-Poaching Architecture

A primary priority for Buckcrest Havens Limited is ensuring that **prospect contact information (phone numbers, email addresses, residential details)** is **strictly safeguarded against internal poaching, unauthorized exporting, or cross-rep exposure**. The CRM enforces iron-clad permission barriers directly at the database and application levels:

User Category	Contact Details Visibility (Phone/Email/Address)	Lead Ownership & Directory Scope
Assigned Sales Executive	FULL ACCESS (Own Leads Only) Can view full phone numbers, WhatsApp, emails, and address of prospects assigned to their personal portfolio.	Exclusively restricted to their own leads. Cannot search, browse, or open another rep's prospects.
Other Sales Executives	ZERO ACCESS (Strictly Blocked) Cannot see the names, phone numbers, or emails of prospects belonging to peers. Direct URL access triggers an immediate 403 Forbidden error.	Can ONLY see anonymous aggregate figures (e.g. 'John: 15 leads generated') on team leaderboards.
Customer Care Team	FULL OUTREACH ACCESS Authorized to view all phone numbers, initiate click-to-call, and record customer call feedback across the organization.	Acts as the centralized tele-calling engine. Can call on behalf of any rep to qualify leads.
Executive Admin / Board	360° TOTAL OVERSIGHT Unrestricted visibility across all company prospects, officer assignments, call response notes, and conversion figures.	Global command: can reassign leads, audit outreach activity, and export management reports.

Protection Guarantee: Sales executives can never extract or poach client contact information generated by other consultants. When an executive views team leaderboards or performance reports, the CRM only displays **metric tallies and numerical volume** — never private client identities.

2. Customer Care Calling & Call Response Logging

Buckcrest Havens operates a dedicated **Customer Care / Tele-calling workflow**. Customer Care representatives act as the frontline relationship bridge — placing outbound calls, confirming client readiness, and logging real-time feedback so sales reps and management are immediately synchronized.

Step-by-Step Customer Care Calling Workflow:

- 1. Accessing Prospect Queue:** Customer Care logs into the portal and views the active prospect queue, filtered by status (e.g. *New Leads Awaiting First Call*).
- 2. One-Click Outreach:** Reps click the telephone icon or WhatsApp button on the client profile to dial directly from an office softphone, cellular device, or web dialer.
- 3. Instant Response Logging:** While or immediately after speaking with the customer, the agent uses the **Quick Call Logger** to record the exact outcome.

Call Response Outcome	When to Select	System Action & Next Step
Spoke with Client (Qualified)	Customer answered, confirmed property interest, and stated budget/timeline.	Prompts consultant to schedule a physical estate inspection.

Client Requested Call Back	Customer was driving, in a meeting, or requested contact at a specific time.	Opens date/time picker to set an automated reminder on the rep's dashboard.
No Answer / Ringing Busy	Call rang out or was engaged. Customer did not pick up.	Increments outreach attempt count; queues for second attempt in 4 hours.
Wrong Number / Invalid	Number is switched off, barred, or belonged to someone else.	Flags record as invalid; notifies capturing rep to verify alternate phone.
Not Interested / Dropped	Prospect is no longer actively seeking real estate investment.	Moves lead to Closed Lost; archives record while preserving call audit trail.

3. Sales Executive Lead Ingestion & Tracking

Sales executives at Buckcrest Havens are empowered with fast, friction-free tools to record their daily prospects. Whether capturing an individual walk-in or bulk-uploading dozens of leads from daily field marketing, the process is streamlined:

A. Individual Lead Capture (Single Prospect)

Click **'Capture Lead'** on the top-right toolbar. The form captures: **Full Name, Phone Number, WhatsApp Number, Email, Residential/Office Address, Budget Range, Preferred Location, Property Interest, and Initial Notes**. The system automatically binds the lead to the capturing consultant as the credited owner.

B. Daily Leads Upload (Bulk CSV Harvester)

When marketing teams return from roadshows, trade exhibitions, or run Facebook/Instagram lead ads, they use the **'Daily Leads Upload (CSV)'** feature:

- **Download Standard Template:** A pre-formatted CSV template ensures columns align perfectly.
- **Smart Phone Deduplication:** The system scans existing numbers in Buckcrest's database and skips duplicates, preventing lead conflicts.
- **Attribution Locking:** All successfully imported leads are automatically attributed to the uploading executive.
- **Marketing Spot Tagging:** Tag the batch with a location tag (e.g. *'Garki Outreach Day 1'*) to measure channel ROI.

4. Management Command Center & Follow-Up Monitoring

For the executive leadership and Sales Director at Buckcrest Havens, the CRM provides total visibility and operational governance:

Executive Control Feature	How Leadership Uses It
Filter by Sales Officer	Select any executive from the dropdown to instantly view their personal pipeline, active lead count, and recent activity notes.
Follow-Up Accountability Audit	View which follow-ups are overdue, completed, or neglected. Identify lagging consultants before prospective buyers go cold.
One-Click Lead Reassignment	If an agent travels, resigns, or fails to contact a high-budget lead, the Admin can reassign that prospect to a senior closer instantly.
Unified Customer Audit Trail	Every interaction — from initial call notes by Customer Care to site inspection outcomes — is recorded chronologically on the lead's master timeline.

5. Strategic Evaluation of Buckcrest's Operating Structure

Senior Real Estate Systems Architecture Review:

Buckcrest Havens' requested structure — separating **Customer Care outreach**, **individual sales rep pipelines**, and **strict anti-poaching privacy** — represents the gold standard in modern real estate agency operations. Here is why:

1. Elimination of Internal Friction & Client 'Ownership Wars':

In fast-growing property firms, sales reps often dispute who first contacted a client when a deposit is made. By enforcing mandatory lead registration, timestamped logging, and automated duplicate phone blocking, the CRM creates an indisputable record of ownership. Every commission dispute is eliminated before it begins.

2. Protection Against Staff Turnover & Client List Theft:

The highest commercial risk in Nigerian real estate brokerage is an agent copying the master client list and moving to a competitor. Because Buckcrest's sales reps can **only access their own assigned clients**, an outgoing agent has zero visibility into the company's broader investor database. Your high-net-worth buyer database remains secure inside the corporate vault.

3. Customer Care Specialization Drives Up Speed-to-Lead:

Sales executives are often in field transit, conducting inspections, or closing deals. Allowing Customer Care to act as centralized tele-callers guarantees that new inquiries are contacted within 15 minutes of arriving, dramatically increasing conversion rates before handing qualified leads to sales executives.

6. Payment Milestones & Accounting Verification

Once a prospect moves to Closed Won, the CRM transitions into the **Payment Milestone & Receipting Workflow**:

- **Installment Plan Configuration:** Choose Outright (100%) or Installments (30% initial deposit followed by 3, 6, or 12 monthly milestones).
- **Proof of Payment Upload:** Sales consultants attach bank transfer slips or deposit receipts directly to the milestone record.
- **Finance Approval Queue:** The Finance Department verifies company bank accounts, approves the milestone, and issues the official allocation receipt.
- **Commission Computation:** Verified deals instantly calculate the consultant's credited commission tally.

7. Certified Handover & Deployment Confirmation

OFFICIAL DEPLOYMENT SIGN-OFF & HANDOVER CERTIFICATE

Client Enterprise: Buckcrest Havens Limited

Live Application URL: <https://bhl.nawpropertyflow.com.ng>

Primary Administrator: admin@buckcresthavens.com

Lead Database Schema: stufedoc_nawcrm_bhl (Isolated MySQL)

Verified Capabilities: Lead Ingestion, Customer Care Call Logger, Follow-Up Engine, Anti-Poaching Scoping, Payment Milestone System

Operational Status: ● **FULLY OPERATIONAL & CERTIFIED READY FOR DAILY USE**
