

 NON-TECHNICAL OPERATIONAL MANUAL

How Construction Inventory Works

An easy step-by-step guide for Site Engineers, Foremen, Storekeepers, Suppliers, and Accountants. Follow the 7 simple steps from ordering cement, blocks, and steel to making supplier payments.

 THE 5 KEY STAKEHOLDERS & THEIR ROLES**Quantity Surveyor**

Sets material recipes & reviews requisitions

**Site Project Manager**

Requests materials needed for daily site work

**Site Storekeeper**

Receives offloaded trucks & issues materials

**External Supplier**

Delivers materials & submits digital invoices

**Lead Accountant**

Matches 3 receipts before sending bank payment

1

THE MATERIAL RECIPE

Step 1: Quantity Surveyor Sets the Standard Recipe (BOM)

 **Real-World Analogy:** Just like baking a cake requires a recipe (e.g. *2 cups flour + 3 eggs*), casting concrete has an engineering standard.

What Happens: The Quantity Surveyor logs in and enters standard coefficients (e.g. *"1m³ deck slab casting = 7 bags of cement + sand + granite"*). This prevents site workers from over-requesting or stealing materials.

 Who does this?

QS Babatunde Sanusi (qs@propertyflow.com)

 Where in the App?

Sidebar → **QS Bill of Materials (BOM)**

2

THE SITE SHOPPING LIST

Step 2: Site Engineer Requests Materials (MRF)

 **Real-World Analogy:** Writing a shopping list before heading to the market.

What Happens: The Site Engineer needs materials for upcoming site work: *"1,000 bags of cement for 1st Floor Slab casting on Monday."* He opens the app and submits a **Material Requisition Form (MRF)**. The QS reviews and approves it in 1 click.

 Who does this?

Engr. Emeka Nwosu (site.manager@propertyflow.com)

3

OFFICIAL ORDER TO VENDOR

Step 3: Company Issues Purchase Order (PO)

 **Real-World Analogy:** Giving an official purchase contract to Dangote Cement or African Steel with locked-in prices.

What Happens: The system automatically creates a **Purchase Order (PO)** (e.g. *1,000 bags @ ₦8,500 = ₦8,500,000*). Small orders are approved by Site Managers, while big orders (>₦5m or >₦20m) are approved by the Project Director.

 Who does this?

Director Ahmed Bello (admin@propertyflow.com)

4

GATE DELIVERY & OFFLOADING

Step 4: Storekeeper Receives Goods at Site Gate (GRN)

 **Real-World Analogy:** The trailer arrives at the gate, offloads 1,000 bags of cement, and the storekeeper counts them before the driver leaves.

What Happens: The Storekeeper logs a **Goods Received Note (GRN)**. He enters driver phone, vehicle plate, waybill number, and snaps a photo. Phone GPS verifies he is physically inside the site yard (stops fake/ghost deliveries).

 **Stock is automatically added to the Site Warehouse!**

 Who does this?

Musa Aliyu (storekeeper@propertyflow.com)

5

GIVING MATERIALS TO SITE WORKERS

Step 5: Storekeeper Issues Materials to Foremen (MIV)

 **Real-World Analogy:** Handing 400 bags of cement over to the bricklayers and casting crew.

What Happens: Storekeeper opens **Material Issue Voucher (MIV)**, selects 400 bags, and assigns it to "1st Floor Slab Casting". The Site Engineer signs on the phone screen with his finger.

🌟 **Warehouse stock drops from 1,000 → 600 bags. ₦3.4m cost is charged to the building!**

 Who does this?

Storekeeper & Site Engineer

 Where in the App?

6

HONEST INCIDENT LOGGING

Step 6: Logging Damaged or Broken Materials (Waste Log)

 **Real-World Analogy:** 15 bags get soaked by a rainstorm or 20 blocks break during handling.

What Happens: Storekeeper logs a **Waste & Scrap Log** with a photo and explanation (*"Rainstorm damage during staging"*). The system safely writes off the stock so warehouse numbers match physical counts 100%.

 Who does this?

Storekeeper (storekeeper@propertyflow.com)

 Where in the App?

Sidebar → **Waste & Loss Logs**

7

PAYING THE SUPPLIER

Step 7: Accountant 3-Way Match & Bank Payment

 **Real-World Analogy:** Checking 3 receipts before transferring money from the company account:

- 1. **What did we order?** → Purchase Order (*1,000 bags @ ₦8,500*)
- 2. **What did the storekeeper receive?** → Gate Delivery GRN (*1,000 bags*)
- 3. **What is the supplier billing us?** → Vendor Invoice (*₦8,500,000*)

What Happens: If all 3 match, Accountant clicks "**Approve Payment**". System deducts **5% Withholding Tax (WHT = ₦425,000)** for FIRS and queues **95% Net Pay (₦8,075,000)** to the supplier's bank account.

 Why This System Protects NAW Properties:**Zero Ghost Deliveries**

GPS tracking confirms every truck is inside the site gate before paperwork is generated.

**Accurate Job Costing**

You know the exact cement, steel, and block cost for every slab, column, and unit built.

**100% Tax & Audit Compliant**

Double-entry accounting, 5% WHT deductions, and waybill photos are stored securely forever.
