

ENTERPRISE SECURITY ARCHITECTURE & REGULATORY COMPLIANCE

Enterprise Trust, Security & NDPA 2023 Compliance

An authoritative overview of NAW PropertyFlow's data protection safeguards, tenant database isolation, cryptographic encryption standards, and full alignment with the Nigeria Data Protection Act 2023.

NDPA 2023 Compliant

Aligned with statutory data controller obligations overseen by the NDPC.

AES-256 / TLS 1.3

Military-grade encryption for all database records at rest and in transit.

Tenant Isolation

Strict logical and database separation ensuring 100% proprietary data privacy.

STATUTORY COMPLIANCE

Nigeria Data Protection Act (NDPA 2023) Alignment

How NAW PropertyFlow protects property developers and client personal data under Nigerian law.

1. Data Controller vs. Data Processor Roles

Statutory Clarity

Under the NDPA 2023, the **Developer is the Data Controller** retaining complete ownership and lawful purpose over buyer data. **NAW PropertyFlow acts strictly as the Data Processor**, processing information exclusively under written instructions without third-party monetization.

2. Client KYC & Sensitive Data Protection

KYC Vault

Buyer identification documents (NIN, Passports, utility bills) uploaded to the Diaspora Portal or Legal Document Factory are encrypted and stored in private vaults accessible only by authorized compliance officers.

3. Data Subject Rights & Portability

Zero Vendor Lock-in

In full compliance with NDPA Section 34, developers can export 100% of their raw plot inventory, transaction histories, client records, and legal archives in standardized formats (CSV, JSON, SQL) anytime.

Legal Counsel Summary:

Deploying NAW PropertyFlow provides your organization with an audit-ready compliance posture, satisfying NDPC annual filing requirements.

INFRASTRUCTURE SECURITY

Cryptographic Architecture & Access Governance

Multi-layered defensive architecture protecting financial records and plot allocation ledgers.

1. Multi-Tenant Database Isolation

Logical Separation

Each developer instance operates with dedicated tenant identification scoping. Database queries are strictly partitioned at the application layer, guaranteeing that no developer or broker can view records from another organization.
2. Encryption Standards (At-Rest & In-Transit)

AES-256 / TLS 1.3

All network traffic between client browsers, diaspora portals, and our servers is secured via **TLS 1.3**. Database tables, files, and transaction logs are encrypted at rest using **AES-256** cryptographic algorithms.
3. Immutable Action Audit Logs

Full Forensics

Every critical operational event (plot allocation, receipt generation, commission approval, permission changes) is recorded in an immutable audit ledger with timestamps, user IP addresses, and before-and-after change diffs.

Granular Role-Based Access Control (RBAC):

Enforce strict departmental separation (e.g. Sales reps cannot view company payroll; Front Desk cannot approve commissions; Realtors cannot view total land acquisition costs).

BUSINESS CONTINUITY

Disaster Recovery, Backup & Service Level Agreement

Engineered for high-availability enterprise resilience and continuous operational uptime.

1. Automated Daily Snapshots & Redundancy

Point-in-Time Recovery

Automated encrypted database snapshots are taken every 24 hours and stored across geographically separated redundant storage nodes. Point-in-time recovery enables restoration within minutes in the event of accidental staff deletions.

2. 99.9% Uptime Service Level Agreement

High Availability

Our cloud infrastructure guarantees 99.9% operational availability, backed by proactive server monitoring, automated load balancing, and dedicated technical support.

Enterprise Trust & Compliance Inquiries

Request custom Data Processing Agreements (DPA), technical security audits, or private tenant deployment reviews.
